

Pro BOOSTER

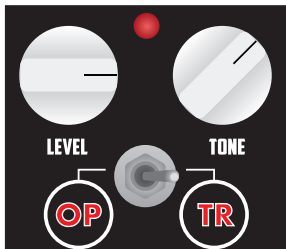

Pro Booster is a Guitar Pedal Booster that acts to increase the volume louder. suitable for use in a clean sound booster or to raise the volume of a solo for Prominence on stage

The special feature of this booster is that it has 2 circuits in one. Most pedal boosters often they are built on opamp IC, or a Transister, which provides sound that different, but Pro Booster brings both circuits together in one box

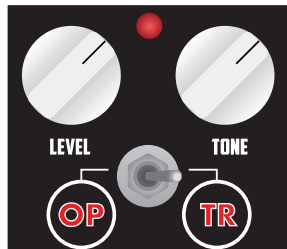

When selecting the OP position, it will select the boost operation through the Opamp IC circuit but if you choose to TR position, it will select the sound booster through Transister JFET circuit.

Other adjustments are also adjust the Level loudness and Tone not complicated easy to adjust.

Sample Setting

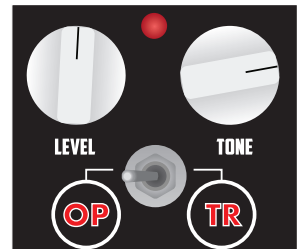

Attack Clean

Dirt Clean
