

# DELICATE 2

**Delicate 2** is an "Tube overdrive sound in a box" best for guitarist who need subtle smooth drive and rich warmer sound more than 808 legendary.

Circuit inside come with JRC4558D the most IC chip use with great pedal on the world. What different form first version? The Delicate V1. give you select compress sound with 2 choice between diode and mosfet. But this version we give you 2 choice between 2 diode compress (classic) and 4 diode compress (modern)

The classic (2 diode) give you vintage classic overdrive same as Delicate V1. but The modern (4 diode) little more attack and louder little bit. sound great.

We also added feature "bright" and "warm" selector the bright give you fender tweed gain style and warm is same sound with Delicate V1.

This device is True bypass wiring with input ground signal and support 6-18v DC for better sound tone dynamic

## SOUND SAMPLE SETTING

smooth drive

clean boost

tweed drive

gain booster

## The Controls:

**Drive** : adjust amount of gain.

**Tone** : adjust low to hi frequency.

**Level** : adjust output level.

**Toggle Switch1** : select between 2 or 4 diode clipping compress.

**Toggle Switch2** : select between warm or bright sound.

## Specifications

Voltage : 9V DC Negative ground.

Current : 10 mA

Complete true bypass with input ground signal
