

TIME CAPSULE ECHO DELAY

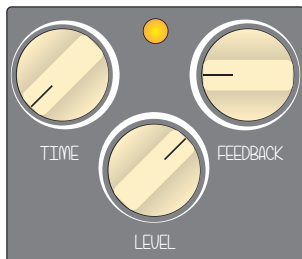

Time Capsule Echo Delay give you analog sounding delay just like classic tape echo delay unit it's should be no distortion or tone coloration as long as input level is in range below maximum allowed.

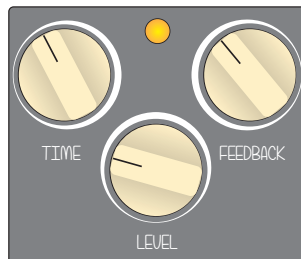

With setting this device can do everything from tight slapback echoes to long, multi-repeat echos when compared with modern digital delay this device more than warmer and richer "Pure Analog" sound.

True bypass wiring with Input ground signal that sure no signal crosstalk when pedal is off

Example Pedal Setting

SLAP

SOLO LEAD

DOTS 8th

ECHO

Tone Control

LEVEL : controls the volume of the repeats. When Level is at its minimum setting, you won't hear any repeats. When it's all the way up, the repeats should be as loud as the original signal.

TIME : Controls the delay time from 40 ms - to 600ms

FEEDBACK: determines the amount of repetitions. At its minimum setting, Feedback outputs a single repetition of the original signal. From that point on, as you turn up Feedback you get more repeats.

Specifications

Voltage : 9V DC Negative ground.

Current : 30 mA

Complete true bypass with ground signal input
