

SeeknMetal

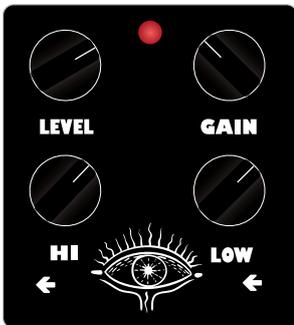

SeeknMetal is a Metal Distortion on the box. Simulates sound from Tube Hi-Gain Amplifier. to give a Hi gain distortion sound suitable for Rock to Metal style. There are 4 Knobs control including Level, Gain, HI, and Low for customize the sound as you like.

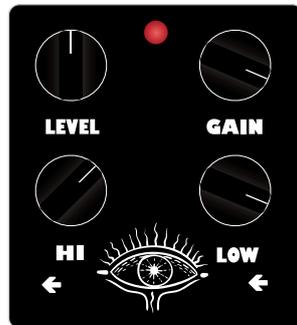

SeeknMetal is a Hi Gain Distortion Cascading FET circuit, with MOSFET distortion for incredibly realistic tube quality sounds.

SeeknMetal uses True Bypass circuit, voltage 9V DC. Negative center

SAMPLE SETTING

Dynamic Rock

THE CONTROLS.

LEVEL : Adjust volume of pedal

GAIN : Adjust gain

HI : Adjust hi frequency

LOW : Adjust low frequency

Specifications

Voltage : 9V DC negative ground.

Current : 10 mA.

Complete true bypass with ground signal input.
