

TIME CAPSULE 2

Time Capsule 2 Give you analog sounding delay just like classic tape echo delay unit it's should be no distortion or tone coloration as long as input level is in range below maximum allowed.

With setting this device can do everything from tight slapback echoes to long, multi-repeat echoes when compared with modern digital delay this device more than warmer and richer "Pure Analog" sound. great for various music style such as pop, rock, blue, jazz etc.

What first from the first version? we added "INPUT LEVEL" knob for adjust "Balanced Output Signal" Well known Delay with True bypass usually sound louder when used with other true bypass pedals. (sometime lower)

INPUT LEVEL feature help you adjust balanced signal output for not too much louder or lower sound.

True bypass wiring with Input ground signal that sure no signal crosstalk when pedal is off

SOUND SAMPLE SETTING

SLAP

SOLO LEAD

DOTS 8th

ECHO

Tone Control

WET: controls the level of delay repeats. When level is at its minimum setting, you won't hear any repeats. When it's all the way up, the repeats should be as loud as the original signal.

TIME : adjust the delay time from 40 ms - to 600ms

FEEDBACK : determines the amount of repetitions. At its minimum setting, Feedback outputs a single repetition of the original signal. From that point on, as you turn up Feedback you get more repeats

INPUT LEVEL : adjust to balanced output signal

Specifications

Voltage : 9V DC Negative ground.

Current : 30 mA

Complete true bypass with ground signal input
